

Valid variable **int switch**

Recall these code snippets

`printf ("Neso Academy");` from lecture 2

`Printf ("%d" , var);` from lecture 2

`printf ("%d %d", var1, var2);` just randomly chosen

First argument in “printf” is always a string constant  
sequence of characters to be printed on screen.

`printf ("%d %d %d" , var1, var2, );` error
